

Delicious Bass Ale Clone

Malt Base 7.2 LBS LME or 6 LBS DME, 1/2 Cup Brown Sugar

Specialty Grains 10 oz. 55 L crystal

Hops: 7 HBU Challenger, 8 HBU Northdown (English Northern Brewer)

Other 3 Hop Sacks, 5 oz. Priming Sugar

Suggested Yeast: White Labs (British or Equiv) / Wyeast 1098

Instructions:

1. Remove **Crushed Grains** from package and put in muslin bag. Tie bag at end to allow maximum circulation. Place in minimum 1 gallon cold water, slowly bring to approx. 160 deg., hold temp for 10 min. Discard grain, add gypsum if water is soft.
2. Add **Malt Extract and brown Sugar**, stir well to dissolve. Bring to a boil, add **Challenger Hops**, and continue boil for 45 min. Add **Irish moss (Optional) and 1/2 Northdown Hops**, boil for 10 minutes and add **1/2 Northdown Hops**, and boil for 5 minutes. Remove from heat. Cool Wort below 100°F.
3. Pour unfermented beer (wort) slowly into fermentation vessel containing enough cold water to total 5 gallons.
4. Let temperature drop to approx. 80 degrees. Take hydrometer reading, sprinkle or “pitch” yeast on top. Affix cover and airlock to fermenter and stabilize temp. at approx. 67 – 72 degrees.
5. Airlock should be active within 24 hours, with fermentation slowing down by the end of day 7, the clearing stage is beginning. Siphon beer into clean carboy, affix airlock and cover to keep light out and let clear for approx. 7 days.
6. When ready to bottle, boil priming sugar in approx. 1 cup water for 1 minute, add to bottom of bottling bucket, then siphon beer into the same bucket (take final hydrometer reading while siphoning into bucket). Fill bottles to 1 “ from top of bottle and cap.
7. Store beer at 67 – 70 degrees for 7 – 10 days minimum.
